

WINTER2017

SPORTFUL.COM

TRUSTED BY CHAMPIONS WORN BY YOUR TEAM

WHY RACE ALONE WHEN YOUR TEAM CAN WEAR SPORTFUL KIT AND RACE TOGETHER LIKE THE CHAMPIONS DO?

Our secret is great passion and creating the clothing the top athletes need to compete at the highest level of the sport they love ... and that we love.

So don't be surprised if the clothing worn by Federico Pellegrino and Dorothea Wierer is the same kit you see on the members of your rival club, who always come perfectly outfitted to the most important cross-country ski races.

Today you can choose to have the same advantage, SPORTFUL, and create your own custom graphics, drawing on the experience of the champions and our tailoring skill to give you the best in materials and service.

See the Italian national team clothing in the Sportful collection at select retailers. It can be your team clothing too if you want!

Don't let our champions be the only ones to benefit from the research and development work we started in 1973.

Follow the CUSTOM TEAM logo and learn how to choose the best clothing for you, whether you want to select pieces from the collection that you will find in the best Sportful shops or whether you prefer to customize the clothing with your club colors and have an exclusive kit like our champions.

Whether your goal is the podium or just to have a great ski with your friends, we offer a complete range of apparel that can be customized with your own designs, colors and logos.

Ready to try something new?

CONCEPT:

We came out with our first sleeveless jacket a few seasons ago and it has started to have a following. A great way to add additional warmth to your core area without restricting arm movement. Completely updated, we have developed this jacket to offer even more versatility as a warm up jacket, extra insulation on extremely cold days or for après-skiing. 3 layer construction with wind and snow repellent outer, Thermore Classic insulation and breathable mesh lining.

FEATURES:

Excellent warmth to weight ratio with 40g Thermore Classic insulation.

Wind Shell Sport main fabric combines excellent protection from the elements with breathability.

Brushed, stretch ThermoDrytex inserts on side and arms for increased comfort and thermo regulation.

Full front zip and 2 zip side pockets.

Lightly insulated hood is perfect for extra warmth when you start out or if the wind picks up.

Light and versatile protection that combines a close technical fit with strategically placed wind protection. The result is a super lightweight jacket that fits and feels almost like a stretch top but has the warmth of a traditional softshell jacket. Designed for multi-sport skiers that will enjoy the performance on the ski trails but that also can use it for other winter activities. Full front wind protection plus partial protection on sleeves and shoulders. Inner layer of thermal protection under wind resistant outer with thicker brushed TDT XP in critical areas and open mesh lining on lower front and wrist areas. Highly breathable fabric inserts on sleeves and back.

FEATURES:

Wind Shell Sport
TDT XP
Reflective front zip
2 side pockets elastic binding on waist and cuffs
Rear reflective accents

ENGADIN WIND JACKET

0400786

Easy to wear, dependable high value jacket.

CONCEPT:

An update to our popular Engadin jacket. Light softshell construction combined with TDTxp for breathability. Good nordic ski apparel should let you have fun skiing and forget about what you are wearing. The Engadin Jacket offers a relaxed fit, wind protection where you need it, highly breathable back and sleeve inserts so that you can enjoy your ski. Slightly looser allows for an extra layer on colder days.

FEATURES:

Microshell light softshell fabric with a light mesh front lining combined with TDT XP brushed fabric for versatility. Looser cut and stretch fabrics offer a great range of motion and space for an extra layer on colder days. 2 side zip pockets with easy to grasp cord pullers. Elastic drawcord on hem.

RYTHMO EVO W PUFFY

0400822

A new generation outer layer with a fresh feminine style

CONCEPT:

A favorite of the Italian National Ski team Women for training and warming up with a progressive look. A great way to add additional warmth to your core area with out restricting arm movement. Completely updated, we have developed this jacket to offer even more versatility as a warm up jacket, extra insulation on extremely cold days or for après- skiing. 3 layer construction with wind and snow repellent outer, Thermore Classic insulation and breathable mesh lining.

FEATURES:

Excellent warmth to weight ratio with 40g Thermore Classic insulation.

Wind Shell Sport main fabric combines excellent protection from the elements with breathability.

Brushed, stretch ThermoDrytex inserts on side and arms for increased comfort and thermo regulation.

Full front zip and 2 zip side pockets.

Lightly insulated hood is perfect for extra warmth when you start out or if the wind picks up.

MERINO SHORT SOCK

0400628

Versatile sock with Merino wool for warmth.

FEATURES:

Merino wool for all weather warmth blended for increased elastic comfort, wicking and durability.

Instep and arch band for comfort and support.

Isolwool for added durability.

Padded toe and heel for comfort and warmth.

Total height 22cm.

65% wool, 20% elastane, 10% polypropylene, 5% polyamide.

CONCEPT:

Ergonomic belt pack is perfect for carrying a little extra gear, food and your favorite bottle. Well suited for all of your skiing from leisure to training to long distance racing. Lightweight, with a roomy pocket and a semi-rigid bottle holder.

FEATURES:

Zippered cargo compartment can fit a few extras like energy food, a spare pair of gloves or a phone and keys.

Pocket has a key clip and internal mesh pocket.

Adjustable, mesh lined waist belt with small stretch insert for increased comfort.

Angled bottle holder with semi-rigid support and elastic bottle retention cord for ease of use (bottle not included).

Wide, low profile front buckle for comfort and easy adjustability even with cold fingers.

Reflective highlights for increased visibility.

|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GORE WINDSTOPPER® 4-WAY WARM | The first Windstopper® that offers 4-way stretch in a 300 gram fleece-backed winter weight fabric. It has excellent breathability along with total windproofness, offers excellent protection from rain, and the high levels of stretch allow improved fitting of the garments. |
| GORE WINDSTOPPER® 4-WAY MID | Sometimes our full thermal 4way Warm is just too warm. This fabric's lightly brushed inner face is soft, has just enough loft to keep you warm, and is great at moving moisture away from the body. It is about 25% lighter in weight than our Windstopper 4way Warm, but still provides 100% wind protection with a water repellent external face. |
| GORE WINDSTOPPER® LIGHT TX | This structured 4-way stretch Windstopper® fabric is extremely lightweight and offers a stretchy, breathable outer shell to keep the wind from entering the garment. The internal texture offers light insulation and improves moisture wicking. As the fabric is also waterproof, the garments offer ideal protection for intense aerobic activities in cool weather. |
| GORE WINDSTOPPER® 4-WAY LIGHT | This 4-way stretch Windstopper® fabric is extremely lightweight and offers a stretchy, breathable outer shell to keep the wind from entering the garment. As the fabric is also waterproof, the garments offer ideal protection for intense aerobic activities in cool weather. |
| POLARTEC® ALPHA® 60GR | Polartec® Alpha® is the latest evolution of synthetic insulation offering a rare combination of lightweight warmth and true breathability in a "puffy" style garment. Alpha® creates insulating loft but does not require down proof fabrics, allowing a sandwich construction with mesh and breathable fabrics for performance that's not available in traditional insulation. |
| PRIMALOFT® SILVER | Primaloft Silver is a synthetic insulation with very high loft and excellent thermal properties. It offers a very high warmth to weight ratio, it is very supple and extremely packable. Its insulation capacity and its highly water resistance keep the wearer warm even in wet conditions. Comfort and thermoregulation are enhanced by its high level of breathability. We have selected Primaloft Silver because it is well suited for the changing weather conditions of the outdoors. |
| THERMORE CLASSIC | Technical insulation that offers superior warmth with light weight as a result of its very fine fibers. Highly breathable, it will retain warmth even in humid conditions. Made of 50% recycled fibers from PET bottles, Oeko- Tex certified raw materials with testing to ensure that the insulation is non- allergenic, non toxic and free from PFOA, PFOS and other dangerous substances. |
| THERMORE® ECODOWN® | Thermore Ecodown® offers the advantages of a synthetic insulation with the soft touch properties of down. Ecodown® features a thinner profile with less bulk combined with Thermore's exclusive fiber migration treatment for greater freedom of movement and reliable warmth. |
| AEROFLOW COMPRESS | When speed matters, this is the answer. Lycra® Power for optimum muscle compression and support, and a dimpled surface structure for slippery aerodynamics. |
| Airflow | Light highly stretch fabric combines smooth next to skin feel with high elasticity for comfort and performance. Highly breathable it also offers rapid moisture transfer: 82% Polyester 18% Elastane. |
| Airflow TX Warm | Lightly structured fabric that combines great stretch, light support, excellent breathability and light insulation. Structured inner face accelerates moisture transfer as well as offering increased warmth. 86%Polyester 14%Elastane. |
| CORDURA | Extremely robust, stretchy and comfortable against the skin, this fabric can protect the parts of a garment that are most prone to wear and tear; without sacrificing freedom of movement and while offering high breathability, including during intense physical activity. |
| DryWoolTec | Unique technical composite fabric construction that combines the warmth of wool with the enhanced moisture management of polypropylene and polyester with polyamide for durability. Light stretch fit, breathable insulation and a distinctive heathered style. |
| FlexTex | Structured stretch fabric that offers a balance of light wind and moisture resistance, durability and breathability. Inserts with FlexTex offer a technical compromise between light durable protection and reliable moisture management for comfortable performance. |
| LYCRA® | A synthetic fiber that gives exceptional stretch as well as the ability to recover its initial shape. This remarkable stretch capacity allows us to make garments with great comfort, close fit, and complete freedom of movement. |
| LYCRA® POWER | Fabric with a high degree of stretch, thanks to 250g Lycra(R) Power TM and 30% elastane. Offers maximum support and muscle compression while at the same time allowing complete freedom of movement. Tear-resistant and offers UV protection. Total comfort. |
| MICROSHELL STRETCH | This innovative new fabric is ideal for outer shells. It features 10,000 mm water column for complete waterproof protection, 10,000 mv/p breathability, and remarkable stretch thanks to its elastic polyurethane membrane. This innovative new fabric is ideal for outer shells |
| SOFT PROTECT STRETCH | Wind resistant, water repellent, breathable very light softshell fabric. Soft, low noise outer face and smooth inner combined with light stretch for all day comfort. Excellent water repellency with DWR finish and micro porous membrane. Breathability is enhanced with light air permeability. Increased air circulation improves moisture management. |
| SOFTSHELL | Ideal fabric for second layers worn during physical activity. Its stretch permits the creation of comfortable clothing. Although extremely lightweight, the fabric provides excellent warmth combined with maximum breathability and partial wind protection |
| SOFTSHELL Warm | Midweight softshell that features insulation with wind and water protection. Soft brushed fleece inner offers great feel, comfort and next to skin warmth. Microporous membrane for moisture management. |
| SOFT SHIELD | Stretch softshell with thick fleece inner and wind resistant outer: Polyester fleece lining absorbs and wicks moisture to outershell while providing insulation. Stretch construction for fit and freedom of movement. Excellent breathability and moisture management. |
| SPEED TECH | Our most technical fabric for aerodynamic race suits. It features an exceptionally smooth face for enhanced laminar air flow, and optimum stretch so that we can make the garments fit perfectly and eliminate extra fabric flapping in the wind. But it's not just aerodynamic: it offers excellent moisture management to keep the athlete dry and comfortable. |
| SpeedTech TX | Our next generation of race suit fabric designed to offer high elasticity which provides light muscle compression and with not move on the body even in race situations. Developed and tested with the Italian National Ski team to deliver superior performance. Lightly structured, it offers an agreeable feel and excellent moisture management as well as excellent aerodynamics. 81% Polyester 19% Elastane. |
| TecDry Mid | Proprietary Sportful fabric that combines great soft stretch and feel, light warmth, great moisture wicking and easy to wear performance comfort. Developed for 4 season next to skin performance with great moisture management, quick drying and multi sport performance. Technical polyester construction with internal structure for excellent moisture management, and elastane for fit and light support. |
| TecDry Thermo | Slightly heavier than TecDry Mid, TecDry Thermo offers increased warmth with great comfort and moisture management. Inner structured surface accelerates moisture transfer as well as trapping air for greater insulation. Versatile stretch fabric that can be worn next to skin or as a second layer. Technical polyester construction with elastane for fit and light support. Proprietary Sportful fabric. |
| THERMODRYTEX | ThermoDrytex fabrics combine elasticity, brushed inner and smoother outer surface. Great stretch fit, durable warmth, light insulation and soft hand feel make this a versatile winter fabric. |
| THERMODRYTEX DOUBLE | The most technical fabric in the Thermodytex family uses a nylon outer face with a fleece hollow core polyester inner layer. Maximum insulation and maximum moisture management thanks to the push-pull wicking effect. The outer surface is treated with a water repellent finish. This is the warmest yet best wicking fabric in the Thermodytex family. |

THERMODRYTEX PLUS

Maximum stretch and a thick warm fleece inner layer make this fabric ideal for uses where warmth and flexibility are key. 84% Nylon and 16% Lycra keep the fabric soft and stretchy. The water repellent silicone finish provides some water repellency. Ideal for tights or back of wind pants.

TDTxp

This 2-way stretch 100% polyester fabric provides excellent warmth and moisture management and is used where high levels of stretch are not required, especially in jerseys or backs of jackets. Not having Lycra® means less stretch but provides better moisture management.

WIND SHELL SPORT

Light, highly wind resistant outer fabric that offers great protection from wind as well light protection from wet snow or rain. Highly breathable for an optimal balance between performance and protection. Partial air permeability accelerates moisture transfer. Lightly structured ripstop surface is also low noise. 100% polyester.

WIND SHIELD

Lightweight, stretch softshell fabric. Combines excellent wind protection and stretch for light insulation, freedom of movement and comfort.

WindWick LT

Lightweight stretch fabric that offers great wind resistance light water and snow repellency and excellent breathability. Unlike traditional coated or membrane fabrics it allows for increased air circulation for accelerated moisture transfer.
